-Lecture 0 discussion:

1. What is the web development and what are types of it?

Web development refers to the process of creating and maintaining websites or web applications that can be accessed through the internet. It involves a combination of programming, design, and content creation to build and manage a web presence. Web developers use a variety of technologies, tools, and programming languages to bring websites and web applications to life.

Types:

1-Front end web development

2-Back-End Web Development

3-full stack web development

4-web application development

2-What is difference between web developers and web designers?

Web Developers: Web developers primarily focus on the functionality and interactivity of a website or web application. They are responsible for creating the underlying code and server-side logic that makes a website work.

Web Designers: Web designers primarily focus on the visual and aesthetic aspects of a website. They are responsible for the layout, colors, typography, and overall look and feel.

3- 3. Is the best for web developer to be full stack development or just one type of development?

the choice between full-stack development and specialization depends on individual career goals and interests. Some developers enjoy the breadth of knowledge and the ability to work on a variety of tasks that full-stack

development offers. Others prefer to become experts in either front-end or back-end development, delving deep into the intricacies of their chosen domain.
